SKILLS SUMMARY

Languages & Frameworks - React, Next.js, Angular, TypeScript, JavaScript, Node.js, Python, Spring Boot, Java
Tools & Platforms - Git, MongoDB, PostgreSQL, AWS (Bedrock AgentCore, Lambda, API Gateway, Aurora, FastAPI, Step Functions), Palantir Foundry, Strapi, OpenObserve, Jira, Confluence, Vercel, Auth0
Engineering Principles - Agentic AI systems, RAG/deep-RAG architecture, clean code, scalable component design, documentation-driven development, CI/CD, system design, automation-first mindset, DX optimization

EDUCATION

Bachelor of Science in Computer Science - University of Arkansas, Fayetteville, AR May 2024

WORK EXPERIENCE

Software Engineer I, Lennar, Bentonville, AR August 2025 - Present

- Designed, developed, and delivered AI for HR Portal — a React-Vite SPA hosted in Palantir Foundry, serving as the unified home for AI-powered HR applications
- Designed, developed, and delivered Raw Notes Processor, an HR interviewing utility that transforms shorthand interview notes into formatted documents, with automated integration into the Associate Relations Reports Automator for streamlined case evidence aggregation; fully built in Palantir Foundry
- Designing and actively delivering Learning Content Generator — an agentic deep-RAG AI tool combining large source documents, images, and a terminology dictionary to generate any kind of learning content on demand; users report it as highly effective for cross-document analysis and surfacing information gaps in source material
- Learning Content Generator uses a hybrid React-Vite / AWS architecture, featuring an Orchestrator API (Node/Express) that drives Bedrock AgentCore Runtime agents via SSE, and a Documents API (Python FastAPI) handling document intake, chunking, embedding, and Word document creation; currently leading migration to fully cloud-native AWS to reduce cost, improve speed, and streamline DX
- Designed, developed, and delivered the Trade Partner Portal MVP — a React-Vite SPA with Strapi CMS on AWS (Aurora PostgreSQL, API Gateway, Lambda proxy), dynamic markdown pages, multi-language support, and a custom AI-powered CMS translation plugin enabling one-click translations
- Resolved numerous production issues within hours of being reported, consistently maintaining high system reliability

Software Engineer II, Walmart Global Tech, Bentonville, AR July 2024 - May 2025

- Led end-to-end revamp of the Cypress automation suite for Express Memberships, growing test coverage from under 30% to over 80%; built Confluence-linked coverage tracking integrated with Jira for backlog grooming and gap analysis
- Implemented OpenObserve dashboard & alert monitoring for Payments & Returns Middleware; led team knowledge-sharing demos and was recognized for high ownership and consistently delivering well-tested work

Software Engineer, Kondux LLC, Remote November 2023 - July 2024

- Delivered end-to-end front end for the Persona AI Portal using Next.js and Tailwind, handling complex UI logic including persona selection, wallet authentication flow, and dynamic chat interfaces
- Built the Disclosure Collection minting dApp, integrating smart contracts into the frontend and wallet-based logic that enabled ~\$200k in revenue
- Consolidated multiple web3 products into a unified platform with modular components, improving DX and allowing for faster iteration across dApps
- Developed a real-time proof-of-concept demo of a specialized secure 3d asset delivery pipeline under extremely tight deadlines to improve the company's relationship with NVIDIA partners

Software Engineer Intern, Walmart Global Tech, Bentonville, AR May 2023 - August 2023

- Developed scalable Spring Boot APIs adhering to enterprise standards for documentation, exception handling, and performance
- Collaborated with front-end teams to resolve integration issues and focused on testable, maintainable code using Git workflows and code review practices

PROJECTS

Muscle Contraction Monitoring System - visit mcms.taylorhoyt.com Fall 2023 - Spring 2024

- Built with biomedical engineers; Node/Express backend with secure MongoDB storage, React/Electron frontend, Auth0 authentication, and HIPAA-adjacent multi-role access design

Solar Powered Lawn Mower Spring 2022

- Team of four; emission-free mower meeting CPSC standards, dual solar panels charging a 24V DC battery system operable in cloudy conditions
